

Aftercare Instructions (14 Days)

The aftercare instructions act only as a guide and results are not guaranteed. Everyone's skin will respond differently to microblading. Some clients will heal very quickly, while others will not. Some clients may need more than 2 sessions to achieve the desired results. How you take care of your brows during the healing process and beyond will greatly affect your results and longevity.

Aftercare DOs!

- 4 hours after your appointment GENTLY clean your brows with a saline pad or a damp cotton pad. Pat dry.
- Do this 3-5 times a day to keep the area clean.
- Lightly moisturize the microbladed area with the healing cream I have provided after each cleaning.
- Continue to clean your brows and moisturize this way over the next 14 days.
- Showers and baths are fine but avoid getting soap or shampoo on your eyebrows for the first 5 days.

Aftercare DO NOTs!

- No saunas, pools or steam rooms for the next 14 days
- No exercising to the point of sweating for the next 10 days.
- No makeup on your eyebrows for 2 weeks.
- Do not sunbathe and avoid tanning booths for the next 2 weeks.
- Do not use laser light therapy on your microbladed brows. It can change the colour of the pigment.
- Do not pick or scratch at the dry, flakey skin. Let the skin fall off naturally. Picking them can cause scarring and premature loss of pigment.

- Do not tint or dye your brows for 1 month.
- Do not use anti-acne products on the treated area.
- Do not use skin lightening creams around the brow area.
- Do not use anti-aging products containing AHAs, Retin A, Lactic or Glycolic Acids.
- Do not thread, wax or use hair removal products during the healing process.

Once Healed.

- Sun exposure can cause fading and/or discoloration. Please remember to use sunscreen.
- Cosmetic procedures such, as laser resurfacing and laser hair removal, glycolic acid and chemical peels, and microdermabrasion may lighten, darken or change the colour of the pigment. Before undergoing any type of these procedures inform your technician that you have had microblading.

What To Expect.

After your brows are microbladed the treated area will appear darker and bolder in colour and more sharply defined. This can last up to one week after the treatment while the initial healing process takes place. The treated area may feel like a sunburn but there shouldn't be much discomfort.

During the initial healing period, there should be minimal flaking or scabbing of skin. If there is some scabbing or flaking, do not pick, and allow the scab or dry skin to come off on its own.

Once the scabs have fallen off a shiny layer of healing skin will completely cover the microbladed hair strokes. It will appear as if the tattoo has disappeared. But don't worry, with in 1-2 weeks the hair strokes will slowly reappear as a lighter shade as your skin regenerates.

The complete healing process takes about 6-8 weeks, at which time the true colour of the tattoo is evident. During this process, your tattoo will soften and lighten. Be patient as your skin is still regenerating.

A second treatment is always need 6 to 8 weeks after the initial session, sometimes a third is also needed to achieve the desired look.

If you have any questions or concerns after your session please contact me.
